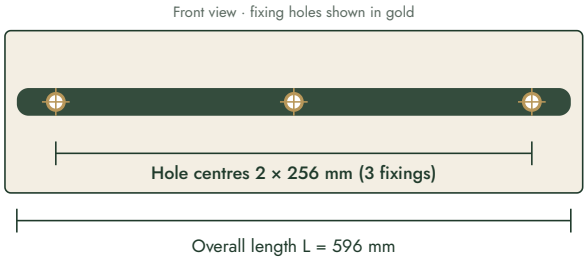
- Drawer fronts
- Tall larder doors
- Bedroom furniture
- Media units

Length & fixing positions

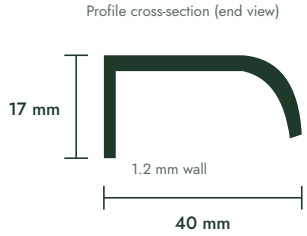
Front view of the profile



Hole centres 2 × 256 mm (3 fixings), centred on the length.
Fixings sit 42 mm in from each end.

Profile section

Dimensions from the manufacturer's drawing



40 × 17 mm aluminium profile, 1.2 mm wall.
Allow for the profile when setting gaps to worktops, ceilings and neighbouring doors.

Fitting in six steps

01 Plan the edge
Decide which edge takes the profile: top edge for base units and drawers, bottom edge for wall units, leading edge for tall doors.

02 Check the gaps
Make sure the door still clears the worktop, ceiling or next door once the profile is on.

03 Centre the profile
Hold the profile in place on the edge and centre it on the door width (or run it full width).

04 Mark the fixings
Mark through each fixing hole with a sharp pencil or bradawl.

05 Pilot drill
Drill small pilot holes (about Ø2.5 mm). Take care not to come through the face of the door.

06 Fix and check
Screw on with the supplied screws, starting in the middle. Check the door opens and closes freely.

Good to know

- Fit one door first and check it against its neighbours before doing the rest.
- Use a depth stop on the drill so pilot holes never break through the front.
- For a continuous look, line profiles up across adjacent drawers.
- Anodised aluminium: wipe with a soft, damp cloth and dry.
- No abrasive pads, solvents or bleach.
- For indoor furniture. Keep away from direct heat sources.
