Ideal for

Sticking doors

Noisy doors

Doors jumping the track

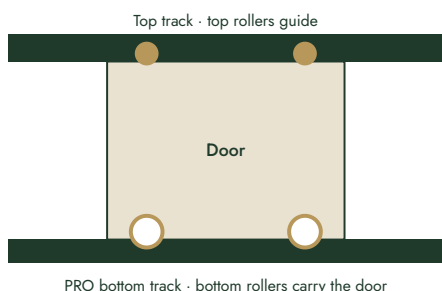

Refurbishments

Moving house

Spare parts

How the rollers work

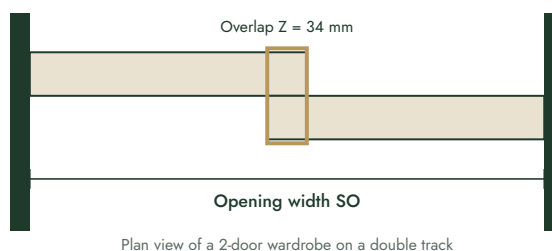

Front view of one door

Bottom rollers carry the weight in the PRO track; **top rollers only guide** the door upright.

Door width formula

For reference when replacing doors

Plan view of a 2-door wardrobe on a double track

NOVO S, 2 doors: door width = (opening + 31) ÷ 2.
NERO, 2 doors: (opening + 26) ÷ 2. Door height = opening – 40 mm.

Fitting in six steps

01 Remove the door

Lift the door up into the top track and swing the bottom out of the PRO track.

03 Fit the bottom rollers

Fit the new PRO bottom rollers in the same positions.

05 Refit the door

Lift into the top track, drop the bottom onto the PRO track and level with the adjuster.

02 Take off the old rollers

Unscrew the old bottom rollers from the bottom strip and the top rollers from the door.

04 Fit the top rollers

Screw the top rollers to the top of the door.

06 Fit positioners & brush

Clip the positioner into the track and fit the bumper brush to the handle profile.

Good to know

- Check the track is clean before refitting – grit wears rollers fast.
- Adjust both bottom rollers so the door hangs parallel to the wall.
- Two people make removing tall doors safer.
- Do not exceed 50 kg per door.
- Vacuum the bottom track regularly.
- Send us a photo if unsure the doors are GTV.

Spares

Full roller set for one door, or individual spares.
